

**Central Communications of Atlantic Health Hospitals Empowers Its First Responders By Deploying
New Mobile Data Technology**

VisiNet Mobile Data Solution to Streamline Operations and Improve Field Communications

TriTech Software Systems, a leading provider of integrated public safety software solutions, is pleased to announce that Central Communications (CenCom) of Atlantic Health has implemented TriTech's VisiNet Mobile™ data solution. CenCom successfully deployed 90 mobile units in its emergency vehicles for efficient unit tracking and dispatch and to provide paramedics and first responders with critical information in the field.

"Our VisiNet Mobile project has been on our roadmap for quite some time, and in just a few weeks of usage, we have witnessed some significant benefits in our operations," says CenCom Manager Gareth Williams. "The mobile units are equipped with automatic vehicle locator (AVL) enabling the communication center to receive accurate unit location information for efficient unit tracking, assignment and dispatch. Similarly, our efficiencies in the field are increased as paramedics can now provide unit status information, receive up-to-date incident, patient and location information from their vehicle with a simple touch of a button."

VisiNet Mobile is a wireless PC-based mobile fleet application that seamlessly extends CenCom's VisiCAD Command, its computer-aided dispatch solution developed by TriTech, to mobile computers. The highly secure, wireless solution operates on a variety of commercial and proprietary wireless platforms to provide access to mission-critical information while out in the field. Real time updates to incident and location information and full messaging capabilities bridge the communications gap between field personnel and the dispatch center. The mobile solution provides detailed routing instruction with visual map overlay, turn-by-turn text directions and voice-over navigation to expedite response to the incident location.

"As a long-time client of TriTech Software Systems, we are excited that Atlantic Health has continued to add TriTech's products to enhance their communications solution," says Chris Maloney, president and CEO of TriTech Software Systems. "Our products are geared to gather and provide information to where it's needed most – field personnel. VisiNet Mobile seamlessly extends CAD information to the field in a user-friendly intuitive application to enhance situational awareness with access to critical patient and incident information. By empowering field personnel and paramedics with CAD information from their vehicles, CenCom can streamline operational efficiencies and improve ambulance services to the citizens of Central New Jersey. "
